DETAILED ACTION

Drawings

1. The corrected or substitute drawings were received on September 30, 2002, paper No. 14. These drawings are approved.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

3. Claim 8 and 16 are rejected under 35 U.S.C. 102(e) as being anticipated by Tsunoi, US Patent No. 6,429,516.

Regarding claim 8, Tsunoi discloses a printed circuit board unit comprising:

a printed circuit board (circuit board 22, see figure 1, column 4, line 15-30);

an electronic component (chip 20, see figure 1, column 4, line 15-30);

a solder bump interposed between the printed circuit board and the electronic component so as to fix the electronic component to the printed circuit board (solder bump 23, see figure 1, column 4, line 15-30 and column 5, line 5-10); and

an interposer disposed between the printed circuit board and the electronic component so as to define a through hole for containing the solder bump, wherein at least an inner surface of the through hole is covered with a coating wet to melted state of the solder bump (interposer 21 with plated portion 25a, see figure 1, column 4, line 38–45, as the plating in the interposer is used for electrical connection of the bump and the plating disclosed on column 4, line 30-45, the plating has to be inherently wet to the solder).

Regarding claim 16, Tsunoi further discloses the outer peripheral size of the solder bump is set smaller than an inner peripheral size of the through hole, see figure 1.

Response to Arguments

4. Applicant's arguments with respect to amended claim 8 have been considered but are moot in view of the new ground(s) of rejection. A prior art was not applied in the previous action as claim 8 was a dependent claim depending upon claim 1, and claim 1 was claiming a thin interposer for creating a constriction and such interposer with the

through hole coating was not disclosed in the specification. Now, with the amendment, the scope of claim is changed.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ishwar (I. B.) Patel whose telephone number is (703) 305 2617. The examiner can normally be reached on M-F (6:30 - 4) First Friday Off.
